DETAILED ACTION

Allowable Subject Matter

Claims 1-61 allowed.

The following is an examiner's statement of reasons for allowance:

As to claim 1, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method of detecting a frequency of an optical signal including: providing a first optical carrier frequency locked to a mode of a resonator of known free spectral range; providing a reference resonator of known free spectral range differing from first resonator; and measuring a beat frequency difference signal comprised of a mixing of the reference and carrier frequencies, in combination with the rest of the limitations of claim 1.

As to claim 10, the prior art of record, taken alone or in combination, fails to disclose or render obvious a method of detecting a frequency of an optical signal including: defining a carrier frequency grid; defining a reference frequency grid; and measuring a beat frequency difference signal comprised of a mixing of the reference and carrier frequencies, in combination with the rest of the limitations of claim 10.

As to claim 39, the prior art of record, taken alone or in combination, fails to disclose or render obvious an apparatus for detecting a frequency of an optical signal including: providing a first optical carrier frequency locked to a mode of a resonator of known free spectral range; providing a reference resonator of known free spectral range differing from first resonator; and measuring a beat frequency difference signal comprised of a mixing of the reference and carrier frequencies, in combination with the rest of the limitations of claim 39.

As to claim 52, the prior art of record, taken alone or in combination, fails to disclose or render obvious an apparatus for detecting a frequency of an optical signal within a communications channel a stabilized laser that provides a reference signal spectrally offset from an optical carrier of the plurality of optical carriers by a spectral quantity within a predetermined bandwidth and a photodetector that mixes the reference signal with the plurality of carrier frequencies to create a heterodyne beat frequency with a closest optical carrier frequency, in combination with the rest of the limitations of claim 52.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
